CAREER SUMMARY

I'm a passionate game designer that has worked on multiple projects (both in school and personally in Unity and Unreal Engine. I have a passion for creating and making things that can evoke emotions in people, and I enjoy using different mediums to do so, but I definitely have a soft spot for doing it with games. For the past few years, I've been designing game systems, mechanics and levels, putting a little bit of myself into each design I make. I love the process of iterating on things, watching my designs transform before my very eyes, especially when there is a group of people making the game with me, because you never know for sure what you're going to create together. Collaborative communication in itself is an art that I love to participate in.
